

Multi-paradigm Studio Exercise 1:

Yiheng Ding

4.

The code is:

```
#include <iostream>
#include <thread>

using namespace std;

void hello() {
    cout << endl << "hello world" << endl;
    cout.flush();
}

int main(int, char * []) {
    thread t(hello);
    t.join();

    system("pause");
    return 0;
}
```

The output is :

D:\Programming\Visual Studio 2010

```
hello world
请按任意键继续. . .
```

The same as the former one.
